THINGSDATA CONTROL

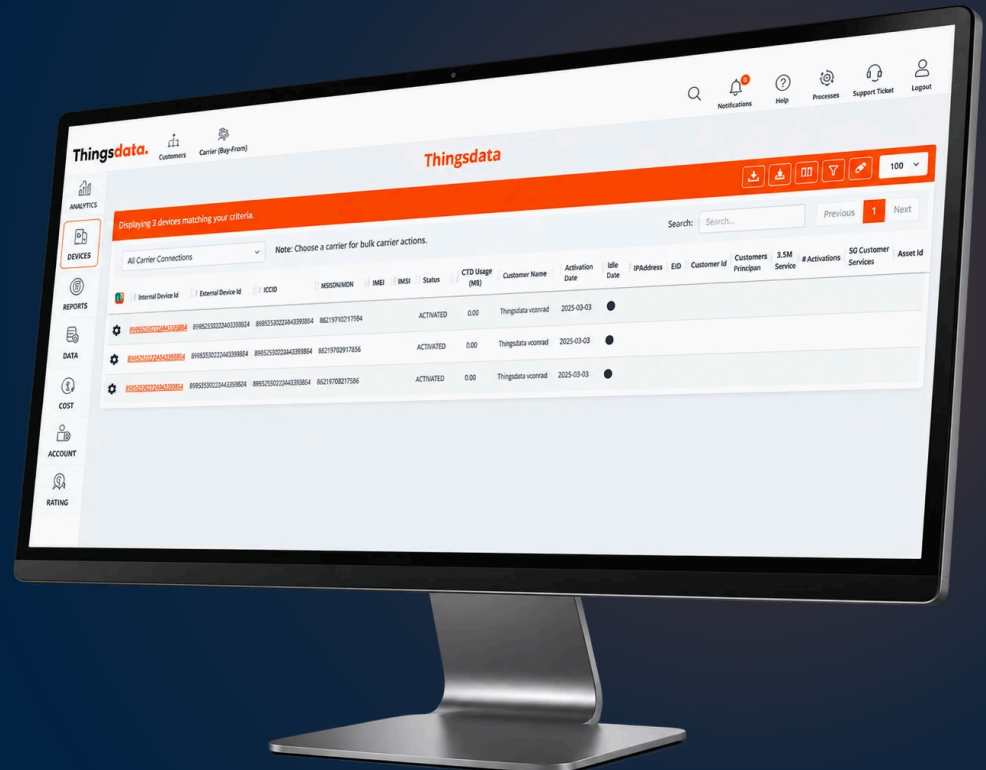

Stop logging into 5 different CMPs to manage your IoT connectivity.

One Connectivity Management Platform for centrally managing all your SIM cards, routers and gateways, regardless of the operator.

Sound familiar?

- You manage SIM cards and hardware through multiple operators.
- You want one overview of all your SIM cards instead of separate systems.
- You lack visibility into your contracted plans.
- You want to be able to manage the configuration of your IoT connectivity yourself.
- You currently manage your routers or gateways separately from your connectivity.

Then Thingsdata Control is the solution you are looking for!

All things **all data.**

What is Thingsdata Control?

Thingsdata Control is a single connectivity management platform that allows you to manage all your SIM cards, routers and gateways. It is completely operator-independent and fully configured by Thingsdata.

SEE YOUR TOTAL
DATA USAGE AT
A GLANCE!

Overview and control

- One central platform for connectivity and hardware.
- Insight into all your subscription plans.
- Cross-provider lifecycle management.

Flexibility and autonomy

- Switch SIM cards between subscription plans.
- eSIM management and provisioning.
- API integration with your own business-specific application.

Why Thingsdata?

- We take care of the entire setup.
- We handle the onboarding process.
- You can get started immediately.

Control over costs and risks

- Your own IoT dashboards and reports.
- Alerts for unusual usage.
- Usage insights for cost optimization.

Less administration

- Less switching between systems.
- All management data centralized in one place.

You can also integrate SIM cards from other operators into your overview.

The Thingsdata team is ready to explore the possibilities for your IoT project together with you.
